Python version of SwAMP Demo	1
------------------------------	---

Python version of SwAMP Demo

This version of the demo is purely conceptual: since it's in Python, it allows one to see more clearly how to implement the algorithm. However, it's very slow; if you have MATLAB installed on your computer, you should try the C (MEX) version!

To run this demo, just execute the `demo.py` file. You need to have **Python 2.7x** and the **Numpy** and **Matplotlib** libraries installed on your computer.
